MUTUAL AID AMONG SAVAGES.

The immense part played by mutual aid and mutual support in the evolution of the animal world has been briefly analysed in two preceding papers. We have now to cast a broad glance upon the part played by the same agencies in the evolution of mankind. We saw how few are the animal species which live an isolated life, and how numberless are those which live in societies, either for mutual defence, or for hunting and storing up food, or for rearing their offspring, or simply for enjoying life in common. We also saw that, though a good deal of warfare goes on between different classes of animals, or different species, or even different tribes of the same species, peace and mutual support are the rule within the tribe, or the species; and that those species which best know how to combine, and to avoid competition, have the best chances of survival and of a further progressive development. They prosper, while the unsociable species decay.

It is evident that it would be quite contrary to all that we know of nature if men were an exception to so general a rule; if a creature so defenceless as man was at his beginnings should have found his protection and his way to progress, not in mutual support, like other animals, but in a reckless competition for personal advantages, with no regard to the interests of the species. To a mind accustomed to the idea of unity in nature, such a proposition appears utterly indefensible. And yet, improbable and unphilosophical as it is, it has never found a lack of supporters. There were always writers who took a pessimistic view of mankind. They knew it, more or less superficially, through their own limited experience; they knew of history what the annalists, always watchful of wars, cruelty and oppression, told of it, and little more besides; and they concluded that mankind is nothing but a loose aggregation of beings, always ready to fight with each other, and only prevented from so doing by the intervention of some authority.

Hobbes took that position in the last century; and while some of his contemporaries endeavoured to prove that at no epoch of its existence—not even in its most primitive condition—mankind lived

in a state of perpetual warfare; that men have been sociable even in
the state of nature, and that want of knowledge, rather than the
natural bad inclinations of man, brought humanity to all the horrors
of its early historical life, he maintained, on the contrary, that the
so-called 'state of nature' was nothing but a permanent fight
between individuals, accidentally huddled together by the mere
caprice of their bestial existence. True, that science has made
some progress since Hobbes's time, and that we have safer ground to
stand upon than the speculations of Hobbes or Rousseau. But the
Hobbesian philosophy has plenty of admirers still; and we have had
of late quite a school of writers who, taking possession of Darwin's
terminology rather than of his leading ideas, made of it an argument
in favour of Hobbes's views upon primitive man, and even succeeded
in giving them a scientific appearance. Mr. Huxley, as is known, took
the lead of that school, and in a recent paper he represented
primitive men as a sort of tigers or lions, deprived of all ethical
conceptions, fighting out the struggles for existence to its bitter end,
and living a life of 'continual free fight'; to quote his own words—
'beyond the limited and temporary relations of the family, the
Hobbesian war of each against all was the normal state of existence.'

It has been remarked more than once that the chief error of
Hobbes and the eighteenth-century philosophers altogether was to
imagine that mankind began its life in the shape of small straggling
families, something like the 'limited and temporary' families of the
bigger carnivores, while in reality it is now positively known that
such was not the case. Of course, we have no direct evidence as to
the modes of life of the first man-like beings. We are not yet
settled even as to the time of their first appearance, geologists being
inclined at present to see their traces in the pliocene, or even the
miocene, deposits. But we have the indirect method which permits
us to throw some light even upon that remote antiquity. A most
careful investigation into the social institutions of the lowest races
has been carried on during the last thirty years, and it has revealed
among the present institutions of primitive folk some traces of
still older institutions which have long disappeared, but nevertheless
left unmistakable traces of their previous existence. A whole
science devoted to the embryology of human institutions has thus
developed in the hands of Lubbock, Edwin Tylor, Morgan, Maclennan,
Bachofen, Maine, Post, Kovalevsky, and many others. And
that science has established beyond any doubt that mankind did not
begin its life in the shape of small isolated families. Far from being
a primitive form of organisation, the family is a very late product of
human evolution. As far as we can go in the paleo-ethnology of
mankind, we find men living in societies—in tribes similar to those
of the highest mammals; and an extremely slow and long evolution
was required to bring these societies to the gentile, or clan organisation, which, in its turn, had to undergo another, also very long evolution, before the first germs of family, polygamous or monogamous, could appear. Societies, bands, or tribes—not families—were thus the primitive form of organisation of mankind and its earliest ancestors. That is what ethnology has come to after painstaking researches. And in so doing it is simply to what might have been foreseen by the zoologist. None of the higher mammals, save a few carnivores and a few undoubtedly decaying species of apes (orang-outangs and gorillas), live in small families, isolatedly struggling in the woods. All others live in societies. And Darwin so well understood that islately living apes never could have developed into man-like beings, that he was inclined to consider man as descended from some comparatively weak but social species, like the chimpanzee, rather than from some stronger but unsociable species, like the gorilla. Zoology and paleo-ethnology are thus agreed in considering that the band, not the family, was the earliest form of social life. The first human societies simply were a further development of those societies which constitute the very essence of life of the higher animals.

If we now go over to positive evidence, we see that the earliest traces of man, dating from the glacial or the early post-glacial period, afford unmistakable proofs of man having lived even then in societies. Isolated finds of stone implements, even from the old stone age, are very rare; on the contrary, wherever one flint implement is discovered others are sure to be found, in most cases in very large quantities. At a time when men were dwelling in caves, or under occasionally protruding rocks, in company with mammals now extinct, and hardly succeeded in making the roughest description of flint hatchets, they already knew the advantages of life in societies. In the valleys of the tributaries of the Dordogne, the surface of the rocks is in some places entirely covered with caves which were inhabited by palaeolithic men. Sometimes the cave-dwellings are superposed in stories, and they certainly recall much more the nesting colonies of swallows than the dens of carnivores. As to the flint implements discovered in those caves, to use Lubbock's words,

* The Descent of Man, end of ch. II. pp. 55 and 64 of the second edition.

* Anthropologists who fully endorse the above views as regards man nevertheless intimate, sometimes, that the apes live in polygamous families, under the leadership of 'a strong and jealous male.' I do not know how far that assertion is based upon conclusive observation. But the passage from Brehm's Life of Animals, which is sometimes referred to, can hardly be taken as very conclusive. It occurs in his general description of monkeys; but his more detailed descriptions of separate species either contradict it or do not confirm it. Even as regards the cercopithèques, Brehm is affirmative in saying that they 'nearly always live in bands, and very seldom in families' (French edition, p. 69). As to other species, the very numbers of their bands, always containing many males, renders the 'polygamous family' more than doubtful. Further observation is evidently wanted.

* Lubbock, Prehistoric Times, fifth edition, 1890.

one may say without exaggeration that the same is true of other palaeolithic stations. Investigations that the inhabitants of the south of France partook of tribal meals are evident. So that men lived in societies, and had even at that extremely remote epoch.

The same is still better proved as regards stone age. Traces of neolithic man have been discovered, and so that we can reconstruct his extent. one may say without exaggeration that they are numberless.' The
same is true of other palaeolithic stations. It also appears from Lartet's
investigations that the inhabitants of the Aurignac region in the
south of France partook of tribal meals at the burial of their dead.
So that men lived in societies, and had germs of a tribal worship,
even at that extremely remote epoch.

The same is still better proved as regards the later part of the
stone age. Traces of neolithic man have been found in numberless
quantities, so that we can reconstitute his manner of life to a great
extent. When the ice-cap (which must have spread from the Polar
regions as far south as middle France, middle Germany, and middle
Russia, and covered Canada as well as a good deal of what is now the
United States) began to melt away, the surfaces freed from ice were
covered, first, with swamps and marshes, and later on with number-
less lakes. Lakes filled all depressions of the valleys before their
waters dug out those permanent channels which, during a subsequent
epoch, became our rivers. And wherever we explore, in Europe,
Asia, or America, the shores of the literally numberless lakes of that
period, whose proper name would be the Lacustine period, we find
traces of neolithic man. They are so numerous that we can only
wonder at the relative density of population at that time. The
'stations' of neolithic man closely follow each other on the terraces
which now mark the shores of the old lakes. And at each of those
stations stone implements appear in such numbers, that no doubt
is possible as to the length of time during which they were inhabited
by rather numerous tribes. Whole workshops of flint 'implements,
 testified of the numbers of workers who used to come together,
have been discovered by the archaeologists.

Traces of a more advanced period, already characterised by the
use of some pottery, are found in the shell-heaps of Denmark. They
appear, as is well known, in the shape of heaps from five to ten feet
thick, from 100 to 200 feet wide, and 1,000 feet or more in length, and
they are so common along some parts of the sea-coast that for a long
time they were considered as natural growths. And yet they 'contain
nothing but what has been in some way or other subservient to the
use of man,' and they are so densely stuffed with products of human
industry that, during a two days' stay at Milgaard, Lubbock dug out
no less than 191 pieces of stone-implements and four fragments of
pottery.7 The very size and extension of the shell-heaps prove that
for generations and generations the coasts of Denmark were inhabited

6 That extension of the ice-cap is admitted by most of the geologists who have
specially studied the glacial age. The Russian Geological Survey already has taken
this view as regards Russia, and most German specialists maintain it as regards
Germany. The glaciation of most of the central plateaux of France will not fail to
be recognised by the French geologists, when they pay more attention to the glacial
deposits altogether.

7 Prehistoric Times, pp. 232 and 242.
by hundreds of small tribes which certainly lived as peacefully together as the Fuegian tribes, which also accumulate like shell-heaps, are living in our own times.

As to the lake dwellings of Switzerland, which represent a still further advance in civilisation, they yield still better evidence of life and work in societies. It is known that even during the stone age the shores of the Swiss lakes were dotted with a succession of villages, each of which consisted of several huts, and was built upon a platform supported by numberless pillars in the lake. No less than twenty-four, mostly stone age villages, were discovered along the shores of Lake Leeman, thirty-two in the Lake of Constance, forty-six in the Lake of Neuchâtel, and so on; and each of them testifies to the immense amount of labour which was spent in common by the tribe, not by the family. It has even been asserted that the life of the lake-dwellers must have been remarkably free of warfare. And so it probably was, especially if we refer to the life of those primitive folk who live until the present time in similar villages built upon pillars on the sea coasts.

It is thus seen, even from the above rapid hints, that our knowledge of primitive man is not so scanty after all, and that, so far as it goes, it is rather opposed than favourable to the Hobbesian speculations. Moreover, it may be supplemented, to a great extent, by the direct observation of such primitive tribes as now stand on the same level of civilisation as the inhabitants of Europe stood in prehistoric times.8

8 It is known that some scientists are inclined to see in the lower races—degenerated species of mankind who formerly knew a higher civilisation. To the general arguments already opposed to the degeneration theory by Lubbock and Edwin Taylor let me add the following. Save a few tribes clustering in the less accessible highlands, the ‘savage’ represents a grade which encroaches the more or less civilised nations, and they occupy the extremities of our continents, most of which have retained still, or recently were bearing, an early post-glacial character. Such are the Eskimos and their congeners in Greenland, Arctic America, and Northern Siberia; and, in the Southern hemisphere, the Australians, the Papuas, the Fuegians, and, partly, the Bushmen; while within the civilised area, like primitive folk are only found in the Himalayas, the highlands of Australasia, and the plateau of Brazil. Now it must be borne in mind that the glacial age did not come to an end at once over the whole surface of the earth. It still continues in Greenland. Therefore, at a time when the littoral regions of the Indian Ocean, the Mediterranean, or the Gulf of Mexico already enjoyed a warmer climate, and became the seats of higher civilisations, immense territories in middle Europe, Siberia, and Northern America, as well as in Patagonia, Southern Africa, and Southern Australasia, remained in early post-glacial conditions which rendered them inaccessible to the civilised nations of the torrid and sub-tropical zones. They were at that time what the terrible wastes of North-West Siberia are now, and their population, inaccessible to and untouched by civilisation, retained the characters of early post-glacial man. Later on, when desiccation rendered these territories more suitable for agriculture, they were peopled with more civilised immigrants; and while part of their previous inhabitants were assimilated by the new settlers, another part migrated further, and settled where we find them. The territories they inhabit now are still, or recently were, sub-glacial, as to their physical features; their arts and implements are those of the neolitho

The first thing which strikes the primitive folk is the complexity of family ties under which they are not family, in the sense we attribute to it. But they are by no means loose coming in a disorderly manner to their caprices. All of them, which has been described by More ‘gentile,’ or clan organisation.9

To tell the matter as briefly as possible, mankind has passed at its beginning, as described as that of ‘communal marriage had husbands and wives in common guiltiness. But it is also certain that intercourse were imposed at a very soon prohibited between the sons and daughters, and aunts. Later on in and daughters of the same mother fail to follow. The idea of a group (presumed descendants from one stock in one group) was evolved, and marriage prohibited. It still remained ‘communal marriage had to be taken from another class, numerous, and subdivided into small classes (usually four), between certain well-defined classes and now among the Kamaroi-speaking, its first germs appeared amidst the peoples who was captured in war from some of the whole gens, the capturer, under certain obligations be taken by him to a separate habit, the gens a separate family, the appearance a quite new phase of civilisation.

9 Lewis H. Morgan, Ancient Society, a great from Savagery through Barbarism to	tions of Consanguinity and Affinity in Hu vol. xv. When Morgan first described the account all but general extension, maintaining the basis of the consecutive steps of human e. But the most careful researches prosecuted by recent law, have proved that all races pass through the same stages of development among various savages. See the works of Kovalevsky, Lépirt, and so on.
The first thing which strikes us as soon as we begin studying primitive folk is the complexity of the organisation of marriage relations under which they are living. With most of them the family, in the sense we attribute to it, is hardly found in its germ. But they are by no means loose aggregations of men and women coming in a disorderly manner together in conformity with their momentary caprices. All of them are under a certain organisation, which has been described by Morgan in its general aspects as the 'gentile,' or clan organisation.

To tell the matter as briefly as possible, there is little doubt that mankind has passed at its beginnings through a stage which may be described as that of 'communal marriage'; that is, the whole tribe had husbands and wives in common with but little regard to consanguinity. But it is also certain that some restrictions to that free intercourse were imposed at a very early period. Inter-marriage was soon prohibited between the sons of one mother and her sisters, grand-daughters, and aunts. Later on it was prohibited between the sons and daughters of the same mother, and further limitations did not fail to follow. The idea of a gens, or clan, which embodied all presumed descendants from one stock (or rather all those who gathered in one group) was evolved, and marriage within the clan was entirely prohibited. It still remained 'communal,' but the wife or the husband had to be taken from another clan. And when a gens became too numerous, and subdivided into several gentes, each of them was divided into classes (usually four), and marriage was permitted only between certain well-defined classes. That is the stage which we find now among the Kamilaroi-speaking Australians. As to the family, its first germs appeared amidst the clan organisation. A woman who was captured in war from some other clan, and who formerly would have belonged to the whole gens, could be kept at a later period by the capturer, under certain obligations towards the tribe. She may be taken by him to a separate hut, and thus constitute within the gens a separate family, the appearance of which evidently was opening a quite new phase of civilisation.

age; and, notwithstanding their racial differences, and the distances which separate them, their modes of life and social institutions bear a striking likeness. So we cannot but consider them as fragments of the early post-glacial population of the now civilised area.

* Lewis H. Morgan, Ancient Society, or Researches in the Lines of Human Progress from Savagery through Barbarism to Civilization, New York, 1877. Also, 'Systems of Consanguinity and Affinity in Human Family,' in Smithsonian Contributions, vol. xvii. When Morgan first described the clan organisation, and concluded as to its all but general extension, maintaining that the marriage-laws lie at the very basis of the consecutive steps of human evolution, he was accused of exaggeration. But the most careful researches prosecuted since, by a whole phalanx of students of ancient law, have proved that all races of mankind bear traces of having passed through the same stages of development of marriage laws as we now see in force among various savages. See the works of Maclean, Bachevon, Dugun, Post, Kovalevsky, Lippert, and so on.
Now, if we take into consideration that this complicated organisation developed among men who stood at the lowest known degree of development, and that it maintained itself in societies knowing no kind of authority besides the authority of public opinion, we at once see how deeply rooted social instincts must have been in human nature, even at its lowest stages. A savage who is capable of living under such an organisation, and of freely submitting to rules which continually clash with his personal desires, certainly is not a beast devoid of ethical principles and knowing no restraints to its passions. But the fact becomes still more striking if we consider the immense antiquity of the clan organisation. It is now known that the primitive Semites, the Greeks of Homer, the prehistoric Romans, the Germans of Tacitus, the early Celts and the early Slavonians, all had their own period of clan organisation, closely analogous to that of the Australians, the Red Indians, the Eskimos, and other inhabitants of the 'savage girdle.' So we must admit that either the evolution of marriage laws went on on the same lines among all human races, or the rudiments of the clan rules were developed among some common ancestors of the Semites, the Aryans, the Polynesians, &c., before their differentiation into separate races, and were maintained, until now, among races long ago separated from the common stock. Both alternatives imply, however, an equally striking tenacity of the institution—such a tenacity that no assaults of the individual could break it down through the scores of thousands of years that it was in existence. The very persistence of the clan organisation shows how utterly false it is to represent primitive mankind as a disorderly agglomeration of individuals, who only obey their individual passions, and take advantage of their personal force and cunningness against all other representatives of the species. Unbridled individualism is a modern growth, but it is not characteristic of primitive mankind.  

Going now over to the existing savages, we may begin with the

---

10 For the Aryans, see especially Prof. M. Kovalyevsky's *Primitive Law* (in Russian). Moscow, 1886 and 1887. Also his lectures delivered at Stockholm.

11 It would be impossible to enter here into a discussion of the origin of the marriage restrictions. Let me only remark that a division into groups, similar to Morgan's *Hamulam*, exists among birds; the young broods live together separately from their parents. A like division might probably be traced among some mammals as well. As to the prohibition of marriages between brothers and sisters, it is more likely to have arisen, not from speculations about the bad effects of consanguinity, which speculations really do not seem probable, but to avoid the too easy precocity of like marriages. Under close cohabitation it must have become of imperious necessity. I must also remark that in discussing the origin of new customs altogether, we must keep in mind that the savages, like us, have their 'thinkers' and *sacants*—wizards, doctors, prophets, &c.—whose knowledge and ideas are in advance upon those of the masses. United as they are in their secret unions (another almost universal feature) they are certainly capable of exercising a powerful influence, and of enforcing customs the utility of which may not yet be recognised by the majority of the tribe.

1891

**Mutual Aid**

Bushmen, who stand at a very low stage of development, indeed that they have no dwellings or permanent soil, occasionally protected by some large creature, and Europeans settled in their territory often engaged in stealing the settlers' cattle and goods. It is too horrible to be related here, was that the Bushmen were slaughtered in 1773 by the Farmers' Alliance, and so killed by hunters lying in ambush, killed wherever met with. The Bushmen, being chieflybowmen, exterminated them, is necessarily when the Europeans came, the Bushmen, sometimes federated together, as common, and divided the spoil, never abandoning their wounded, nor their comrades. Lichtenstein himself were Bushmen, nearly drowned in a river, companions. They took off their clothes themselves; they dried him, his companion, smeared his body with warm grease. And when the Bushmen found that they had treated them well, they expressed their touching attachment to that man who had represented them as good-hearted, devoted, and grateful, all qualities which were practised within the tribe. As to the Bushmen, to say that when a European wishes to be a slave, he stole her child: the mother to share the fate of her child.

The same social manners show a little more developed than the Bantu, as 'the filthiest animals,' and filthy; to the neck and torn till it falls off, yet no kind of furniture within. And they and seem to have known the use of metal and how to use it with the Europeans, they still occur among the human scale. And yet those who sociability and readiness to aid each other.

12 Col. Collins, in *Phil. Transactions* in 1813.

14 Eliezo Roder, *Geographica Universalia*.
Bushman, who stand at a very low level of development—so low indeed that they have no dwellings and sleep in holes dug in the soil, occasionally protected by some screens. It is known that when Europeans settled in their territory and destroyed deer, the Bushmen began stealing the settlers' cattle, whereupon a war of extermination, too horrible to be related here, was waged against them. Five hundred Bushmen were slaughtered in 1774, three thousand in 1808 and 1809 by the Farmers' Alliance, and so on. They were poisoned, like rats, killed by hunters lying in ambush before the carcass of some animal, killed wherever met with. So that our knowledge of the Bushmen, being chiefly borrowed from those same people who exterminated them, is necessarily limited. But still we know that when the Europeans came, the Bushmen lived in small tribes (or clans), sometimes federated together; that they used to hunt in common, and divided the spoil without quarrelling; that they never abandoned their wounded, and displayed strong affection for their comrades. Lichtenstein has a most touching story about a Bushman, nearly drowned in a river, who was rescued by his companions. They took off their furs to cover him, and shivered themselves; they dried him, rubbed him before the fire, and smeared his body with warm greasé till they brought him back to life. And when the Bushmen found, in Johan van der Walt, a man who treated them well, they expressed their thankfulness by a most touching attachment to that man. Burchell and Moffat both represent them as good-hearted, disinterested, true to their promises, and grateful, all qualities which could develop only by being practised within the tribe. As to their love to children, it is sufficient to say that when a European wished to secure a Bushman woman as a slave, he stole her child: the mother was sure to come into slavery to share the fate of her child.

The same social manners characterise the Hottentots, who are but a little more developed than the Bushmen. Lubbock describes them as 'the filthiest animals,' and filthy they really are. A fur suspended to the neck and worn till it falls to pieces is all their dress; their huts are a few sticks assembled together and covered with mats, with no kind of furniture within. And though they kept oxen and sheep, and seem to have known the use of iron before they made acquaintance with the Europeans, they still occupy one of the lowest degrees of the human scale. And yet those who knew them highly praised their sociability and readiness to aid each other. If anything is given to

15 Elíée Reclus, Géographie Universelle, xiii. 475.
a Hottentot, he at once divides it among all present—a habit which, as is known, so much struck Darwin among the Fuegians. He cannot eat alone, and, however hungry, he calls those who pass by to share his food. And when Kolben expressed his astonishment thereto, he received the answer: 'That is Hottentot manner.' But this is not Hottentot manner only: it is an all but universal habit among the 'savages.' Kolben, who knew the Hottentots well and did not pass by their defects in silence, could not praise their tribal morality highly enough.

'Their word is sacred,' he wrote. They know 'nothing of the corruptness and faithless arts of Europe.' 'They live in great tranquillity and are seldom at war with their neighbours.' They are 'all kindness and goodwill to one another. . . . One of the greatest pleasures of the Hottentots certainly lies in their gifts and good offices to one another.' 'The integrity of the Hottentots, their strictness and celerity in the exercise of justice, and their chastity, are things in which they excel all or most nations in the world.'

Tachart, Barrow, and Moodie 17 fully confirm Kolben's testimony. Let me only remark that when Kolben wrote that 'they are certainly the most friendly, the most liberal and the most benevolent people to one another that ever appeared on the earth' (i. 332), he wrote a sentence which has continually appeared since in the description of savages. When first meeting with primitive races, the Europeans usually make a caricature of their life; but when an intelligent man has stayed among them for a longer time, he generally describes them as 'the kindest' or 'the gentlest' race on the earth. These very same words have been applied to the Ostyaks, the Samoyedes, the Eskimos, the Dyaks, the Aleoutes, the Papuans, and so on, by the highest authorities. I also remember having read them applied to the Tunguses, the Tchukhtchis, the Sioux, and several others. The very frequency of that high commendation already speaks volumes in itself.

The natives of Australia do not stand on a higher level of development than their South African brothers. Their huts are of the same character; very often simple screens are the only protection against cold winds. In their food they are most indifferent; they devour horribly putrefied corpses, and cannibalism is resorted to in times of scarcity. When first discovered by Europeans, they had no implements but in stone or bone, and these were of the roughest description. Some tribes had even no canoes, and did not know barter-trade. And yet, when their manners and customs were carefully studied, they proved to be living under that elaborate clan organisation which I have mentioned on a preceding page, 18

18 Quoted in Wait's Anthropologie, ii. 335, 8cc.
19 The natives living in the north of Sydney, and speaking the Kamilaroi language, are best known under this aspect, through the capital work of Lorimer Fison and A. W.

19 The territory they inhabit is comprised of gentes or clans; but the hunting grounds are kept in common, and the game belongs to the whole clan; so that it is not more than a mutual aid. The meals are taken in common, and certain rules about the gathering of roots and grasses may be collected. 20 A more complete account of the life of the Papuans would have been of great value to the French mission, which unfortunately was not able to do better than transcribe a few curious questions of the Paris Anthropological Society on the subject, which the missionaries thought fit to answer, 21

For the Papuans, closely akin to the Aborigines of G. L. Bink, who stayed in N. Australia from 1871 to 1883. Here is the answer to his questioner: 22—

They are sociable and cheerful; they are very brave and courageous. Friendship is relatively weak, and still stronger within the tribe. The friend of the tribesman is the stipulation being that the friend should return the love and the friendship, and that the children of the lover be the children of the friend. They take care not to be abandoned, and in no case are they killed. War prisoners are sometimes put to death, but they are usually put to work. The most ancient man in the family is the judge of the part of it to give to the negro (the congo) and to the crop belong to those who have been taken, and the crop belongs to those who have been taken. —

Howitt, Kamilaroi and Kurnai, Melbourne, 1889, vol. xviii. p. 31, showing the width of Australia.

The territory they inhabit is usually allotted between the different gentes or clans; but the hunting and fishing territories of each clan are kept in common, and the produce of fishing and hunting belongs to the whole clan; so also the fishing and hunting implements.\textsuperscript{19} The meals are taken in common. Like many other savages, they respect certain regulations as to the seasons when certain gums and grasses may be collected.\textsuperscript{20} As to their morality altogether, we cannot do better than transcribe the following answers given to the questions of the Paris Anthropological Society by Lumholtz, a missionary who sojourned in North Queensland: \textsuperscript{21}

\begin{quote}
For the Papuas, closely akin to the above, we have the testimony of G. L. Birk, who stayed in New Guinea, chiefly in Geelwink Bay, from 1871 to 1883. Here is the essence of his answers to the same questioner: \textsuperscript{22}

They are sociable and cheerful; they laugh very much. Rather timid than courageous. Friendship is relatively strong among persons belonging to different tribes, and still stronger within the tribe. A friend will often pay the debt of his friend, the stipulation being that the latter will repay it without interest to the children of the lender. They take care of the ill and the old; old people are never abandoned, and in no case are they killed—unless it be a slave who was ill for a long time. War prisoners are sometimes eaten. The children are very much petted and loved. Old and feeble war prisoners are killed, the others are sold as slaves. They have no religion, no gods, no idols, no authority of any description; the oldest man in the family is the judge. In cases of adultery a fine is paid, and part of it goes to the \textit{nogoria} (the community). The soil is kept in common, but the crop belongs to those who have grown it. They have pottery, and know barter-trade—the custom being that the merchant gives them the goods, whereupon
\end{quote}

\textsuperscript{19} The Folklore, Manners, \textit{sc.}, of Australian Aborigines, Adelaide, 1873, p. 11.
\textsuperscript{20} Grey’s \textit{Journals of Two Expeditions of Discovery in North-West and Western Australia}, London, 1841, vol. II. pp. 298, 297.
\textsuperscript{22} \textit{Ibid.}, p. 386.
they return to their houses and bring the native goods required by the merchant; if the latter cannot be obtained, the European goods are returned. They are head-hunters, and in so doing they prosecute blood revenge. 'Sometimes,' Finsch says, 'the affair is referred to the Rajah of Namototte, who terminates it by imposing a fine.'

When well treated, the Papuas are very kind. Miklukho-Maklay landed on the eastern coast of New Guinea, followed by one single man, stayed for two years among tribes reported to be cannibals, and left them with regret; he returned again to stay one year more among them, and never had he any conflict to complain of. True that his rule was never—under no pretext whatever—to say anything which was not truth, nor make any promise which he could not keep. These poor creatures, who even do not know how to obtain fire, and carefully maintain it in their huts, live under their primitive communism, without any chiefs, and within their villages they have no quarrels worth speaking of. They work in common, just enough to get the food of the day; they rear their children in common; and in the evenings they dress themselves as coquettishly as they can, and dance. Like all savages, they are fond of dancing. Each village has its barlo, or balai—the 'long house,' 'longe maison,' or 'grande maison'—for the unmarried men, for social gatherings, and for the discussion of common affairs—again a trait which is common to most inhabitants of the Pacific Islands, the Eskimos, the Red Indians, and so on. Whole groups of villages are on friendly terms, and visit each other en bloc.

Unhappily, feuds are not uncommon—not in consequence of 'overstocking of the area,' or 'keen competition,' and like inventions of a mercantile century, but chiefly in consequence of superstition. As soon as anyone falls ill, his friends and relatives come together, and deliberately discuss who might be the cause of the illness. All possible enemies are considered, everyone confesses of his own petty quarrels, and finally the real cause is discovered. An enemy from the next village has called it down, and a raid upon that village is decided upon. Therefore, feuds are rather frequent, even between the coast villages, not to say a word of the cannibal mountaineers who are considered as real witches and enemies, though, on a closer acquaintance, they prove to be exactly the same sort of people as their neighbours on the sea-coast.24

Many striking pages could be written about the harmony which prevails in the villages of the Polynesian inhabitants of the Pacific Islands. But they belong to a more advanced stage of civilization.

23 The same is the practice with the Papuas of Kaimani Bay, who have a high reputation of honesty. 'It never happens that the Papua be untrue to his promise,' Finsch says in *Neuguinea und seine Bewohner,* Bremen, 1885, p. 829.

24 *Icetdia* of the Russian Geographical Society, 1889, p. 161, seq. Few books of travel give a better insight into the petty details of the daily life of savages than these scamps from Maklay's note-books.

**1891**

**Mutual Aid among the Frenchmen**

So we shall now take our illustration, however, before leaving even the Fuegians, whose reputation is much better light since they were French missionaries who stay in a malevolence to complain of. In a band of 150 souls, they practise the friendship of the Papuas; they share everything among people very well. Peace prevails.

With the Eskimos and their Kologesh, and the Alcutes, indications of what man may be capable of, implements hardly differ from those of the tribes do not yet know fishing: the harpoon. They know the use of the harpoons, or find it on wrecked vessels as a method of very primitive kind, though there is stage of 'communal marriage,' even. They live in families, but the husbands and wives are often separated, or they remain united in clans, and how could they sustain the hard struggle of hiring their forces? So they devise some work where the struggle for life is hard, in the land. The 'long house' is their central lodge in it, separated from each other, with a common passage in the form of a cross, and in such a centre. The German expedition of those 'long houses' could ascend peace, no dispute arose about the work out the long winter. 'Scolding, or as a misdemeanor, if not produced, namely, the nith-song.'25 Close calls are sufficient for maintaining centres for the interests of the community life. Even in the larger communities the real judgment seat, the offenders being shamed in the

26 Captain Holm's Expedition to East Coast.
27 In Australia whole clans have been to conjure a calamity (Post, *Studien von Europ. Krankh.,* 1890, p. 342). More brotherhood is their spirit.
28 Dr. H. Rink, *The Eskimo Tribes,* p. 1887.
29 Dr. Rink, loc. cit. p. 21. Europeans,
So we shall now take our illustrations from the far north. I must mention, however, before leaving the Southern Hemisphere, that even the Fuegians, whose reputation has been so bad, appear under a much better light since they begin to be better known. A few French missionaries who stay among them 'know of no act of malevolence to complain of.' In their clans, consisting of from 120 to 150 souls, they practise the same primitive communism as the Papuans; they share everything in common, and treat their old people very well. Peace prevails among these tribes.\(^{25}\)

With the Eskimos and their nearest congeners, the Thlinkets, the Kotashes, and the Aleoutes, we find one of the nearest illustrations of what man may have been during the glacial age. Their implements hardly differ from those of paleolithic man, and some of their tribes do not yet know fishing: they simply spear the fish with a kind of harpoon.\(^{26}\) They know the use of iron, but they receive it from the Europeans, or find it on wrecked ships. Their social organisation is of a very primitive kind, though they already have emerged from the stage of 'communal marriage,' even under the gentile restrictions. They live in families, but the family bonds are often broken; husbands and wives are often exchanged.\(^{27}\) The families, however, remain united in clans, and how could it be otherwise? How could they sustain the hard struggle for life unless by closely combining their forces? So they do, and the tribal bonds are closest where the struggle for life is hardest, namely, in North-East Greenland. The 'long house' is their usual dwelling, and several families lodge in it, separated from each other by small partitions of ragged furs, with a common passage in the front. Sometimes the house has the shape of a cross, and in such a case a common fire is kept in the centre. The German expedition which spent a winter close by one of those 'long houses' could ascertain that 'no quarrel disturbed the peace, no dispute arose about the use of this narrow space' throughout the long winter. 'Scolding, or even unkind words, are considered as a misdemeanour, if not produced under the legal form of process, namely, the nith-song.'\(^{28}\) Close cohabitation and close interdependence are sufficient for maintaining century after century that deep respect for the interests of the community which is characteristic of Eskimo life. Even in the larger communities of Eskimos, 'public opinion formed the real judgment seat, the general punishment consisting in the offenders being shamed in the eyes of the people.'\(^{29}\)

\(^{26}\) Captain Holm's Expedition to East Greenland.

\(^{27}\) In Australia whole clans have been seen exchanging all their wives, in order to capture a calamity (Zust, Studien zur Entwicklungs geschichte der Familienrecht, 1890, p. 342). More brotherhood is their specific against calamities.

\(^{28}\) Dr. H. Rink, The Eskimo Tribes, p. 26 (Meditationen om Grönland), vol. xi. 1887.

\(^{29}\) Dr. Rink, loc. cit. p. 21. Europeans, grown in the respect of Roman law, are
Eskimo life is based upon communism. What is obtained by hunting and fishing belongs to the clan. But in several tribes, especially in the West under the influence of the Danes, private property penetrates into their institutions. However, they have an original means for obviating the inconveniences arising from a personal accumulation of wealth which would soon destroy their tribal unity. When a man has grown rich, he convokes the folk of his clan to a great festival, and, after much eating, distributes among them all his fortune. On the Yukon river, in Alaska, Dall saw a family distributing in this way ten guns, ten fur dresses, 200 strings of beads, numerous blankets, ten wolf furs, 200 beavers, and 500 zibelines. After that they took off their festival dresses, gave them away, and, putting on old ragged furs, addressed a few words to their kinsfolk, saying that though they are now poorer than any one of them, they have won their friendship. Like distributions of wealth appear to be a regular habit with the Eskimos, and to take place at a certain season, after an exhibition of all that has been obtained during the year. In my opinion these distributions reveal a very old institution, contemporaneous with the first appearance of personal wealth; they must have been a means for re-establishing equality among the members of the clan, after it had been disturbed by the enrichment of the few. The periodical redistribution of land and the periodical abandonment of all debts which took place in historical times, must have been a survival of that old custom. And the habit of either burying with the dead, or destroying upon his grave, all that belonged to him personally—a habit which we find among all primitive races—must have had the same origin. In fact, while everything that belongs personally to the dead is burnt or broken upon his grave, nothing is destroyed of what belonged to him in common with the tribe, such as boats, or the communal implements of fishing. The destruction bears upon personal property alone. At a later epoch this habit becomes a religious ceremony: it receives a mystical interpretation, and is imposed by religion, when public opinion alone proves incapable of enforcing its general observance. And, finally, it is substituted by either burning simple models of the

seldom capable of understanding that force of tribal authority. 'In fact,' Dr. Rink writes, 'it is not the exception, but the rule, that white men who have stayed for ten or twenty years among the Eskimo, return without any real addition to their knowledge of the traditional ideas upon which their social state is based. The white man, whether a missionary or a trader, is firm in his dogmatic opinion that the most vulgar European is better than the most distinguished native.' The Eskimo Tribes, p. 31.

32 Dall saw it in Alaska, Jacobsen at Igloolik in the vicinity of the Bering Strait. Gilbert Sprout mentions it among the Vancouver Indians; and Dr. Rick, who describes the periodical exhibitions just mentioned, adds: 'The principal use of the accumulation of personal wealth is for periodical distribution.' He also mentions (loc. cit. p. 31) 'the destruction of property for the same purpose' (of equality).

1891 mutual aid among dead men's property (as in China), or burying to the grave and taking it back to his mony is over—a habit which still prevails among swords, crosses, and other marks.

The high standard of the tribal morality has been mentioned in general literature as remarks upon the manners of the Eskimos—will better illustrate savage values, and were written, after a ten years' stay at a remarkable man—the Russian missionary, mostly in his own words:—

Endurability (he wrote) is their chief fault. Do they bathe every morning in the frozen inhaling the icy wind, but their endurance to client food, surpasses all that can be imagined. The Aleout takes care of his children;

30 Voskodimoff, a gift of dried fish, but in the hurry of the departure, he took it home. The missionary was in January; and in November, scarcity of food in the Aleout encampment, among the starving people, and in January it was severe. Morality is both varied and severe. It is unavoidable death; to ask pardon from an enemy; to be convinced of stealing; to cause going to sea in stormy weather; to be driven to become an invalid in case of scarcity of food divided, in which case everyone gives his own; to divulge a public secret to his wife; to refuse, not to offer the best game to the partner in a feast, to scold anyone in scorn, people's presence, and to dance with her; always be made through a third person, who a shame not to know sowing, dancing, and all kinds of making and children, and even to speak to strangers.

Such is Aleout morality, which man by their tales and legends. Let me cite (I wrote (1840) one murder only in the last century in a population of 60,000. Aleouts one not one single common law for forty years. This will not seem strange, the use of rough work.

Veinolinoff, Memoirs relative to the Daniels, St. Petersburg, 1840. Extracts, in English, from A like description of the Australians' morality.
dead man's property (as in China), or by simply carrying his property to the grave and taking it back to his house after the burial ceremony is over—a habit which still prevails with the Europeans as regards swords, crosses, and other marks of public distinction.

The high standard of the tribal morality of the Eskimos has often been mentioned in general literature. Nevertheless the following remarks upon the manners of the Aleoutes—nearly akin to the Eskimos—will better illustrate savage morality as a whole. They were written, after a ten years' stay among the Aleoutes, by a most remarkable man—the Russian missionary, Veniaminoff. I sum them up, mostly in his own words:

Endurability (he wrote) is their chief feature. It is simply colossal. Not only do they bathe every morning in the frozen sea, and stand naked on the beach, inhaling the icy wind, but their endurability, even when at hard work on insufficient food, surpasses all that can be imagined. During a protracted scarcity of food, the Aleoute cares first for his children; he gives them all he has, and himself fasts. They are not inclined to stealing; that was remarked even by the first Russian immigrants. Not that they never steal; every Aleoute would confess having sometime stolen something, but it is always a trifle; the whole is so childish. The attachment of the parents to their children is touching, though it is never expressed in words or settings. The Aleoute is with difficulty moved to make a promise, but once he has made it he will keep it winter or summer.

(An Aleoute made Veniaminoff a gift of dried fish, but it was forgotten on the beach in the hurry of the departure. He took it home. The next occasion to send it to the missionary was in January; and in November and December there was a great scarcity of food in the Aleoute encampment. But the fish was never touched by the starving people, and in January it was sent to its destination.) Their code of morality is both varied and severe. It is considered shameful to be afraid of unavoidable death; to ask pardon from an enemy; to die without ever having killed an enemy; to be convicted of stealing; to capsize a boat in the harbour; to be afraid of going to sea in stormy weather; to be the first in a party on a long journey to become an invalid in case of scarcity of food; to show greediness when food is divided, in which case everyone gives his own part to the greedy man to shame him; to divulge a public secret to his wife; being two persons on a hunting expedition, not to offer the best game to the partner; to boast of his own deeds, especially of invented ones; to scold anyone in scorn. Also to beg; to pet his wife in other people's presence, and to dance with her; to bargain personally; selling must always be made through a third person, who settles the price. For a woman it is a shame not to know sewing, dancing, and all kinds of woman's work; to pet her husband and children, or even to speak to her husband in the presence of a stranger.

Such is Aleoute morality, which might also be further illustrated by their tales and legends. Let me also add that when Veniaminoff wrote (in 1840) one murder only had been committed since the last century in a population of 60,000 people, and that among 1,800 Aleoutes not one single common law offence had been known for forty years. This will not seem strange if we remark that scolding, swearing, and the use of rough words are absolutely unknown in

20 Veniaminoff, Memoirs relative to the District of Unalaska (Russian), 3 vols. St. Petersburg, 1840. Extracts, in English, from the above are given in Dall's Alaska. A like description of the Australians' morality is given in Natere, xii, p. 489.
Aleut life. Even their children never fight, and never abuse each other in words. All they may say is, ‘Your mother does not know sewing,’ or ‘Your father is blind of one eye.’

Many features of savage life remain, however, a puzzle to Europeans. The high development of tribal solidarity and the good feelings with which primitive folk are animated towards each other, could be illustrated by any amount of reliable testimony. And yet it is not less certain that those same savages practise infanticide; that in some cases they abandon their old people, and that they blindly obey the rules of blood-revenge. We must then explain the co-existence of facts which, to the European mind, seem so contradictory at the first sight. I have just mentioned how the Aleute father starves for days and weeks, and gives everything eatable to his child; and how the Bushman mother becomes a slave to follow her child; and I might fill pages with illustrations of the really tender relations existing among the savages and their children. Travellers continually mention them incidentally. Here you read about the fond love of a mother; there you see a father wildly running through the forest and carrying upon his shoulders his child bitten by a snake; or a missionary tells you the despair of the parents at the loss of a child whom he had saved, a few years before, from being immolated at its birth; you learn that the ‘savage’ mothers usually nurse their children till the age of four, and that, in the New Hebrides, on the loss of a specially beloved child, its mother, or aunt, will kill herself to take care of it in the other world.

And so on. Like facts are met with by the score; so that, when we see that these same loving parents practise infanticide, we are bound to recognise that the habit (whatever its ulterior transformations may be) took its origin under the sheer pressure of necessity, as an obligation towards the tribe, and a means for rearing the already growing children. In fact, the savages, as a rule, do not ‘multiply without stint’ as Mr. Huxley puts it. On the contrary, they take all kinds of measures for diminishing the birth-rate. A whole series of restrictions, which Europeans certainly would find extravagant, are imposed to that effect, and they are strictly obeyed. But notwithstanding that, primitive folk cannot rear all their children. However, it has been remarked that as soon as they succeed in increasing their regular means of subsistence, they at once begin to

abandon the practice of infanticide. They obey that obligation reluctantly, as they resort to all kinds of compulsion when a new-born. As has been so well said by Reclus, they invent the lucky chance of the child being born on the last day of sentence for a few hours, and thus it must live all its natural life without its parents. The little ones coming from the first embrace are bade for it by the young men and by the women; they are fed with ooze, and upon them the women and the men, before the necessity of the case, they prefer to expose the baby in some part of the country. Ignorance, need, and of moralising the savage, it would do better to follow the example of the savage and do it themselves till the old age, crossed the South Sea, or travelled on dogs among his tribes; that the bread and fishing implements, and would be palate.

The same is true as regards warfare. We just now saw that the primitive folk are not so widely spread as some writers have thought to be extremely exaggerated, but mostly in the north of Europe; and in such cases exposure of children. When a savage mother saves the child of the children—and the little ones in the family; they cry when they are hungry; when they across the stone beach, or the virgin forest, they there are no invalids carried in savage lands—he begins to regard the sick child as a man, and say until today: ‘Techoi vei no on ot ‘other people’s life: it is time to render what the soldier does in a similar detachment depends upon its being a man in his best friend to render him the place of the other, and campment. And the friend, with a gun into the dying body. So that he himself to die; he himself insists on furthering the community, and obtains the considerations of grave; he invites his kinsfolk to his death, and has done so, it is now his turn; if you may remark his affection. The savage

it is most remarkable that several writers (Middendorf, Schrenk, O. Fisch) described the Ostyaks and Samoyedes in almost the same words. Even when drunken, their quarrels are insignificant. ‘For a hundred years one single murder has been committed in the tundra;’ ‘their children never fight;’ ‘anything may be left for years in the tundra, even food and gin, and nobody will touch it;’ and so on. Gilbert Sproul ‘never witnessed a fight between two sober natives’ of the Alk Indians of Vancouver Island. ‘Quarrelling is also rare among their children.’ (Rink, loc. cit.) And so on.

Gill, quoted in Gerland and Waltz’s Anthropologie, v. 441. See also pp. 436–440, where many facts of parental and filial love are quoted.

Primitve Folk, London, 1891.
abandon the practice of infanticide. On the whole, the parents
obey that obligation reluctantly, and as soon as they can afford it
they resort to all kinds of compromises to save the lives of their
new-born. As has been so well pointed out by my friend Elie
Reclus, they invent the lucky and unlucky days of births, and
spare the children born on the lucky days; they try to postpone the
sentence for a few hours, and then say that if the baby has lived
one day it must live all its natural life. They hear the cries of
the little ones coming from the forest, and maintain that, if heard,
they forbode a misfortune for the tribe; and as they have no baby-
farming nor cwcches for getting rid of the children, every one of
them recoils before the necessity of performing the cruel sentence;
they prefer to expose the baby in the wood rather than to take its
life by violence. Ignorance, not cruelty, maintains infanticide;
and, instead of moralising the savages with sermons, the missionaries
would do better to follow the example of Veniaminoff, who, every
year till his old age, crossed the Sea of Okhotsk in a miserable boat,
or travelled on dogs among his Tchuktehs, supplying them with
bread and fishing implements, and thus really preventing infanticide.

The same is true as regards what superficial observers describe as
parricide. We just now saw that the habit of abandoning old people is
not so widely spread as some writers have maintained it to be. It has
been extremely exaggerated, but it is occasionally met with among
nearly all savages; and in such cases it has the same origin as the
exposure of children. When a 'savage' feels that he is a burden to his
tribe; when every morning his share of food is taken from the mouths
of the children—and the little ones are not so stoical as their fathers:
they cry when they are hungry; when every day he has to be carried
across the stony beach, or the virgin forest, on the shoulders of younger
people—there are no invalid carriages, nor destitutes to wheel them
in savage lands—he begins to repeat what the old Russian peasants
say until nowadays: 'Tchujov' vek zayigrated, Pora nako.' (I live
other people's life; it is time to retire!) And he retires. He does
what the soldier does in a similar case. When the salvation of his
detachment depends upon its further advance, and he can move no
more, and knows that he must die if left behind, the soldier implores
his best friend to render him the last service before leaving the en-
campment. And the friend, with shivering hands, discharges his
gun into the dying body. So the savages do. The old man asks
himself to die; he himself insists upon this last duty towards the
community, and obtains the consent of the tribe; he digs out his
g rave; he invites his kinsfolk to the last parting meal. His father
has done so, it is now his turn; and he parts with his kinsfolk with
marks of affection. The savage so much considers death as part of

---

his duties towards his community, that he not only refuses to be rescued (as Moffat has told), but when a woman who had to be immolated on her husband's grave was rescued by missionaries, and was taken to an island, she escaped in the night, crossed a broad sea-arm, swimming, and rejoined her tribe, to die on the grave. But the savages, as a rule, are so reluctant to take anyone's life otherwise than in fight, that none of them will take upon himself to shed human blood, and they resort to all kinds of stratagems, which have been so falsely interpreted. In most cases, they abandon the old man in the wood, after having given him more than his share of the common food. Arctic expeditions have done the same when they no more could carry their invalid comrades. 'Live a few days more! may be there will be some unexpected rescue!'

European scientists, when coming across these facts, are absolutely unable to understand them; they cannot reconcile them with the high development of tribal morality, and prefer to cast a doubt upon the exactitude of absolutely reliable observers, instead of trying to explain the parallel existence of the two sets of facts: a high tribal morality together with the abandonment of the parents and infanticide. But if these same Europeans were to tell a savage that people, extremely amiable, fond of their own children, and so impressionable that they cry when they see a misfortune simulated on the stage, are living in Europe within a stone's throw from dens in which children die from sheer want of food, the savage, too, would not understand them. I remember how vainly I tried to make some of my Tungus friends understand our civilization of individualism: they could not, and they resorted to the most phantastical suggestions. The fact is that a savage, brought up in ideas of tribal solidarity in everything for bad and for good, is as incapable of understanding a 'moral' European, who knows nothing of that solidarity, as the average European is incapable of understanding the savage. But if our scientist had lived amidst a half-starving tribe not possessing among them all one man's food for so much as a few days to come, he probably might have understood their motives. So also the savage, if he had stayed among us, and received our education, may be, would understand our European indifference towards our neighbours, and our Royal Commissions for the prevention of 'baby-farming.' 'Stone houses make stony hearts,' the Russian peasants say. But he ought to live in a stone house first.

Similar remarks must be made as regards cannibalism. Taking into account all the facts which were brought to light during a recent controversy on this subject at the Paris Anthropological Society, and many incidental remarks scattered throughout the 'savage' literature, we are bound to recognise that that practice was brought into existence by sheer necessity; but that it was further developed by superstition and religion into the form in which it exists either in Fiji or in Mexico. It is a fact that the cannibals were compelled to devour corpses in the belief that if they did not do so, the spirit of the dead would take revenge on the living; and that in cases of absolute necessity they sometimes disinter and to feed upon human flesh. These are ascertained facts. But to the conditions which man had to face, he resorted to even by Europeans, and it is a fact that in most cases the people of necessity, and survived as a superstition, in order to inherit their courage; the enemy's eye or heart was eaten among other tribes, already having, or supposed to have, a developed mythology, evil gods, thinned and human sacrifices required. In this religious phase of its existence, its most revolting character is that in Fiji, where the king could eat any one of his people, a mighty caste of priests, a complicated ceremony of anacracy. Originated by necessity at a later period, a religious institution; long after it had disappeared from a tribe, it was practised in former times, but did not develop. The same remark must be made as regards the abandonment of parents. It was an old custom, and was maintained as a survival of older traditions.

I will terminate my remarks by mentioning also a fact which is a source of most erroneous conclusions. A savage was chased and his flesh must be revenged by blood. If

32. W. T. Pritchard, Polynesian Reminiscences.
by superstition and religion into the proportions it attained in Fiji or in Mexico. It is a fact that until this day many savages are compelled to devour corpses in the most advanced state of putrefaction, and that in cases of absolute scarcity some of them have had to disinter and to feed upon human corpses, even during an epidemic. These are ascertained facts. But if we now transport ourselves to the conditions which man had to face during the glacial period, in a damp and cold climate, with but little vegetable food at his disposal; if we take into account the terrible ravages which scurvy still makes among underfed natives, and remember that meat and fresh blood are the only restoratives which they know, we must admit that man, who formerly was a granivorous animal, became a flesh-eater during the glacial period. He found plenty of deer at that time, but deer often migrate in the Arctic regions, and sometimes they entirely abandon a territory for a number of years. In such cases his last resources disappeared. During like hard trials, cannibalism has been resorted to even by Europeans, and it was resorted to by the savages. Until the present time, they occasionally devour the corpses of their own dead: they must have devoured then the corpses of those who had to die. Old people died, convinced that by their death they were rendering a last service to the tribe. This is why cannibalism is represented by some savages as of divine origin, as something that has been ordered by a messenger from the sky. But later on it lost its character of necessity, and survived as a superstition. Enemies had to be eaten in order to inherit their courage; and, at a still later epoch, the enemy’s eye or heart was eaten for the same purpose; while among other tribes, already having a numerous priesthood and a developed mythology, evil gods, thirsty for human blood, were invented, and human sacrifices required by the priests to appease the gods. In this religious phase of its existence, cannibalism attained its most revolting characters. Mexico is a well-known example; and in Fiji, where the king could eat any one of his subjects, we also find a mighty caste of priests, a complicated theology, and a full development of autocracy. Originated by necessity, cannibalism became, at a later period, a religious institution, and in this form it survived long after it had disappeared from among tribes which certainly practised it in former times, but did not attain the theocratical stage of evolution. The same remark must be made as regards infanticide and the abandonment of parents. In some cases they also have been maintained as a survival of olden times, as a religiously kept tradition of the past.

I will terminate my remarks by mentioning another custom which also is a source of most erroneous conclusions. I mean the practice of blood-revenge. All savages are under the impression that blood shed must be revenged by blood. If anyone has been killed, the

---

murderer must die; if anyone has been wounded, the aggressor's blood must be shed. There is no exception to the rule, not even for animals; so the hunter's blood is shed on his return to the village when he has shed the blood of an animal. That is the savages' conception of justice—a conception which yet prevails in Western Europe as regards murder. Now, when both the offender and the offended belong to the same tribe, the tribe and the offended person settle the affair. But when the offender belongs to another tribe, and that tribe, for one reason or another, refuses a compensation, then the offended tribe decides to take the revenge itself. But primitive folk so much consider everyone's acts as a tribal affair, dependent upon tribal approval, that they easily think the clan responsible for everyone's acts. Therefore, the due revenge may be taken upon any member of the offender's clan or relatives. It may often happen, however, that the retaliation goes further than the offence. In trying to inflict a wound, they may kill the offender, or wound him more than they intended to do, and this becomes a cause for a new feud, so that the primitive legislators were careful in requiring the retaliation to be limited to an eye for an eye, a tooth for a tooth, and blood for blood.

It is remarkable, however, that with most primitive folk like feuds are infinitely rarer than might be expected; though with some of them they attain quite abnormal proportions, especially with mountaineers who have been driven to the highlands by foreign invaders, such as the mountaineers of Caucasia, and especially those of Borneo—the Dyaks. With the Dyaks, the feuds have now gone so far that a young man can neither marry nor be proclaimed of age before he has secured the head of an enemy. This horrid practice has been fully described in a recent English work. But it appears under quite another aspect when we learn that the Dyak headhunter is not actuated by personal passion. He acts under what he considers a moral obligation towards his tribe, just as the European judge who, in obedience to the same, evidently wrong, principle of 'blood for blood,' hands over the condemned murderer to the hangman. Both the Dyak and the European feel remorse if sympathy moved them to spare the lives of those who have wronged them, as otherwise most sympathetic people would do. The same author who has given such a terrible description of the above-mentioned practice, also says: As regards morality, I am bound to assign to the scale of civilization... robberies and thefts... They also are very truthful... If I did not always get, at least, nothing but the truth from the same of the Malays (pp. 200 and 210).

Brock's testimony is fully corroborated by the fact that I fully recognised,' she wrote, 'that I was not alone in this case, but that it was a situation among all the people in the district, and that it was not the result of individual action, but the result of the collective action of the community. Moreover, it is of the utmost importance to the people who live in these parts, that the chief factor for his further evolution, which is entirely wrong when they maintain society, is not the same spirit of solidarity. And when we consider the small strength and speed of man (he walks, but does not fly), are more than counterbalanced, firstly, by his remarkable skill in the use of natural weapons, and Secondly, by his receive and give aid from his fellow men.

In the last century the 'savage' and 'primitive' nature' were idealised. But now scientific researches, especially since some of the best works on the subject, have shown that the picture of the savage was exaggerated. The small strength and speed of man (he walks, but does not fly), are more than counterbalanced, firstly, by his remarkable skill in the use of natural weapons, and Secondly, by his receive and give aid from his fellow men.

1891. **MUTUAL AID AMONG SAVAGES.**

To the hangman. Both the Dyak and the judge would even feel remorse if sympathy moved them to spare the murderer. That is why the Dyaks, apart from the cruelties they commit when actuated by their misconception of justice, are depicted, by all those who know them, as otherwise most sympathetic people. Thus Carl Bock, the same author who has given such a terrible picture of head-hunting, writes:

As regards morality, I am bound to assign to the Dyaks a high place in the scale of civilization. ... Robberies and theft are entirely unknown among them. They also are very truthful. ... If I did not always get the 'whole truth,' I always got, at least, nothing but the truth from them. I wish I could say the same of the Malays (pp. 209 and 210).

Bock's testimony is fully corroborated by that of Ida Pfeiffer. 'I fully recognised,' she wrote, 'that I should be pleased longer to travel among them. I usually found them honest, good, and reserved ... much more so than any other nation I know.' Stoltze used almost the same language when speaking of the Dyaks. They usually have but one wife, and treat her well. They are very sociable, and every morning the whole clan goes out for fishing, hunting, or gardening, in large parties. Their villages consist of big huts, each of which is inhabited by a dozen families, and sometimes by several hundred persons, peacefully living together. They show great respect for their wives, and are fond of their children; and when one of them falls ill, the women nurse him in turn. As a rule, they are very moderate in eating and drinking. Such is the Dyak in his daily life.

It would be a tedious repetition if more illustrations from savage life were given. Wherever we go we find the same sociable manners, the same spirit of solidarity. And when we endeavour to penetrate into the darkness of past ages, we find the same tribal life, the same associations of men, however primitive, for mutual support. Therefore, Darwin was quite right when he saw in man's social qualities the chief factor for his further evolution, and Darwin's vulgarisers are entirely wrong when they maintain the contrary.

The small strength and speed of man (he wrote), his want of natural weapons, &c., are more than counterbalanced, firstly, by his intellectual faculties (which, he remarked on another page, have been chiefly or even exclusively gained for the benefit of the community); and secondly, by his social qualities, which led him to give and receive aid from his fellow men.

In the last century the 'savage' and his 'life in the state of nature' were idealised. But now scientists have gone to the opposite extreme, especially since some of them, anxious to prove the

---

q q 2
animal origin of man, but not conversant with the social aspects of animal life, began to charge the savage with all imaginable 'bestial' features. It is evident, however, that this exaggeration is even more unscientific than Rousseau's idealisation. The savage is not an ideal of virtue, nor is he an ideal of 'savagery.' But the primitive man has one quality, elaborated and maintained by the very necessities of his hard struggle for life—he identifies his own existence with that of his tribe; and without that quality mankind never would have attained the level it has attained now.

Primitive folk, as has been already said, so much identify their lives with that of the tribe, that each of their acts, however insignificant, is considered as a tribal affair. Their whole behaviour is regulated by an infinite series of unwritten rules of propriety which are the fruit of their common experience as to what is good or bad—that is, beneficial or harmful for their own tribe. Of course, the reasonings upon which their rules of propriety are based sometimes are absurd in the extreme. Many of them originate in superstition; and altogether, in whatever the savage does, he sees but the immediate consequences of his acts; he cannot foresee their indirect and ulterior consequences—thus simply exaggerating a defect with which Bentham reproached civilised legislators. But, absurd or not, the savage obeys the prescriptions of the common law, however inconvenient they may be. He obeys them even more blindly than the civilised man obeys the prescriptions of the written law. His common law is his religion; it is his very habit of living. The idea of the clan is always present to his mind, and self-restriction and self-sacrifice in the interest of the clan are of daily occurrence. If the savage has infringed one of the smaller tribal rules, he is prosecuted by the mockeries of the women. If the infringement is grave, he is tortured day and night by the fear of having called a calamity upon his tribe. If he has wounded by accident any one of his own clan, and thus has committed the greatest of all crimes, he grows quite miserable: he runs away in the woods, and is ready to commit suicide, unless the tribe absolves him by inflicting upon him a physical pain and sheds some of his own blood.34

Within the tribe everything is shared in common; every morsel of food is divided among all present; and if the savage is alone in the woods, he does not begin eating before he has loudly shouted thrice an invitation to anyone who may hear his voice to share his meal.35

In short, within the tribe the rule of 'each for all' is supreme, so long as the separate family has not yet broken up the tribal unity. But that rule is not extended to the neighbouring clans, or tribes, even when they are federated for mutual protection. Each tribe, or clan, is a separate unity. Just as among mammals and birds the territory is roughly allotted among separate tribes, so in times of war, the boundaries are respected. Each of his neighbours one must show that he has not entered his own territory or it may not. Therefore the life of the savage is a set of actions, and appears under two different sets of relations within the tribe, and the relations (like our international law) the 'inter-tribal' and the 'common law.' Therefore, when it comes to revolution cruelties may be considered as the admiration of the tribe. This double code of conduct through the whole evolution of mankind, is the same now. We Europeans have realised some sort of this universal rule at any rate—in eradicating that double code, we must also be said that while we have in some sort of solidarity—i.e., theory, at least—over other nations as well, we have lessened the individualism within our own nations, and even within our clans.

The appearance of a separate family again disturbs the established unity. A separate family is a property and accumulation of wealth. But it also obviates its inconveniences; and it is one of the studies to follow in the course of ages that the masses endeavoured to maintain the tribes, the associations which were at work to break up the tribe, and transmit to the initiated only, in the form of witchcraft, also became a power in the hands of the priests which we find at the same time, wares and invasions created new forces of war. But at no period of man's life were wars the same. While warriors exterminated each other in the course of their own massacre, the masses continued, they prosecuted their daily till. And the interesting of studies to follow that life of the means by which they maintained their unity, which was based upon their own conceptions, and mutual support—of common law, in a state. That life shall hope to analyse in.

34 See Bastian's 'Monarch in der Geschichte,' iii., p. 7. Also Grey, loc. cit. ii. p. 238.
35 Mikulka Mackay, loc. cit. Same habit with the Hottentots.
territory is roughly allotted among separate tribes, and, except in times of war, the boundaries are respected. On entering the territory of his neighbours one must show that he has no bad intentions; and if he enters a house, he must deposit his hatchet at the entrance. But no tribe is bound to share its food with the others: it may do so or it may not. Therefore the life of the savage is divided into two sets of actions, and appears under two different ethical aspects: the relations within the tribe, and the relations with the outsiders; and (like our international law) the 'inter-tribal' law widely differs from the common law. Therefore, when it comes to a war the most revolting cruelties may be considered as so many claims upon the admiration of the tribe. This double conception of morality passes through the whole evolution of mankind, and maintains itself until now. We Europeans have realised some progress—not immense, at any rate—in eradicating that double conception of ethics; but it also must be said that while we have in some measure extended our ideas of solidarity—in theory, at least—over the nation, and partly over other nations as well, we have lessened the bonds of solidarity within our own nations, and even within our own families.

The appearance of a separate family amidst the clan necessarily disturbs the established unity. A separate family means separate property and accumulation of wealth. But we saw how the Eskimos obviate its inconveniences; and it is one of the most interesting studies to follow in the course of ages the different institutions (village communities, guilds, and so on) by means of which the masses endeavoured to maintain the tribal unity, notwithstanding the agencies which were at work to break it down. On the other hand, the first rudiments of knowledge which appeared at an extremely remote epoch, when they confounded themselves with witchcraft, also became a power in the hands of the individual which could be used against the tribe. They were carefully kept in secrecy, and transmitted to the initiated only, in the secret societies of witches, shamans, and priests which we find among all savages. By the same time, wars and invasions created military authority, as also castes of warriors, whose associations or clubs acquired great powers. But at no period of man's life were wars the normal state of existence. While warriors exterminated each other, and the priests celebrated their massacres, the masses continued to live their daily life, they prosecuted their daily toil. And it is one of the most interesting of studies to follow that life of the masses; to study the means by which they maintained their own social organisation, which was based upon their own conceptions of equity, mutual aid, and mutual support—of common law, in a word, even when they were submitted to the most ferocious theocracy or autocracy in the state. That life we shall hope to analyse in a subsequent article.

P. Kropotkin.
